CLAIMS:

AI

1. A liquid crystal polymer composition comprising 100 parts by weight of a liquid crystal polymer (A) and 5-100 parts by weight of a plate-shaped filler (B) satisfying the following formulae (1) and (2) and having an average particle diameter of $0.5\text{-}100\,\mu\text{m}$.

 $D/W \le 5 \tag{1}$

 $3 \le W/H \le 200$ (2)

wherein D is the maximum particle diameter of the plate-shaped filler (B), and the direction of the diameter D is defined as x; W is a particle's diameter which is in the direction y at the right angle to the direction x; and H is a thickness of the particle in the direction of z which is vertical to the xy-plane.

- 2. The composition according to claim 1, wherein 5-100 parts by weight of a fibrous filler (C) having an average fiber diameter of $5\text{--}20\,\mu\text{m}$ and an average aspect ratio of at least 15 are further compounded therewith to 100 parts by weight of the liquid crystal polymer (A).
- The composition according to claim 1 or 2, wherein the plate-shaped filler (B) consists of at least one substance selected from talc, mica, kaolin and graphite.
- 4. The composition according to claim 2 or 3, wherein the fibrous filler (C) is glass fiber.

- 5. The composition according to any of claims 1 to 4, wherein the liquid crystal polymer (A) is a polyester amide.
- 6. A connector which is manufactured from the composition mentioned in any of claims 1-5.
